

# VisiWeb® Maintenance Training

Keep the passenger information system of your vehicles and the knowledge of your maintenance crew up to date

For reliable operation of the VisiWeb passenger information system, Ruf offers maintenance training to keep your maintenance crew's knowledge up to date and thus sustainably extend the service life of the systems and vehicles.

For over 20 years, more than 2,600 vehicles from a wide range of manufacturers have been operating worldwide with a VisiWeb passenger information system from Ruf. The overall VisiWeb solution covers the areas of passenger information, infotainment, passenger communication and video surveillance. It provides passengers with reliable visual and acoustic information and contributes to their safety with video surveillance and emergency intercom systems.

## Protecting your investments

The large installed base has proven that investments in the VisiWeb passenger information system are protected in the long term. Thanks to the modular design of the overall system, all the subsystems and com-

ponents can be efficiently maintained and adapted to ongoing technological change without compromising the overall system concept.

## VisiWeb maintenance Knowhow

To ensure long-term, reliable operation of your rolling stock, regular maintenance of the passenger information system is essential. This requires well-trained and experienced personnel.

Due to the well known long service life of the VisiWeb system and the natural fluctuation within maintenance crews, it is important to keep the knowledge of the staff at

a high level and to bring it up to date. It is equally important that newly recruited staff are fully and rapidly trained on the systems.

### Keeping operating costs low

Maintenance trainings help to keep your costs of operation low, increase quality and efficiency and sustainably extend the lifespan of the systems and thus of your fleet.

### Maintenance training package

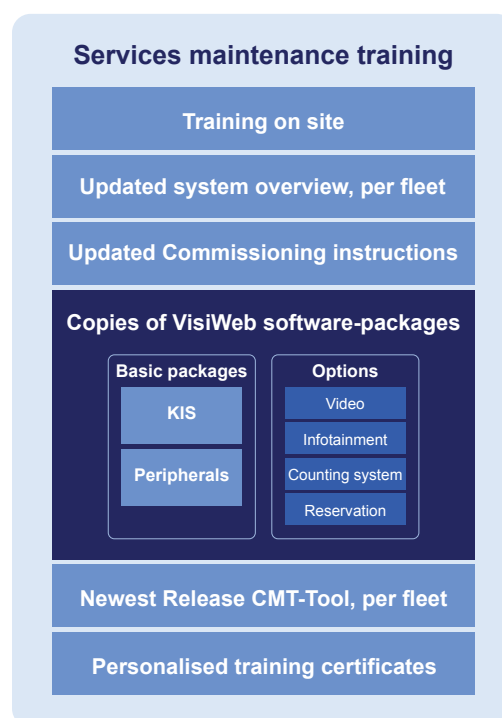

With VisiWeb maintenance training, you receive the perfect service package for maintaining the long-term, reliable operation of your passenger information system.

The extensive training keeps your maintenance crew up to date to carry out updates, maintenance, support, and repairs and enables a quick response in case of malfunctions.

### Training at your site

Ruf will prepare an up-to-date system overview of your VisiWeb installation prior to the training course. The VisiWeb maintenance training courses are held on your premises by experienced Ruf system engineers who are very familiar with the

complete VisiWeb system, including the subsystems and components. They dispose of many years of experience not only in the

implementation of new vehicles but also in the maintenance and repair of existing vehicles. After the maintenance training, a certificate is issued to all participants.
